

## Quiz 8 Chemical Principles I

Chem 1984 Fall 2013

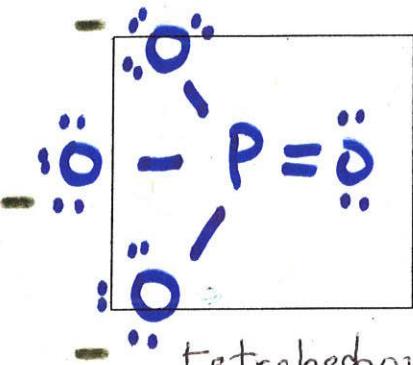

Your name:

ANSWERS

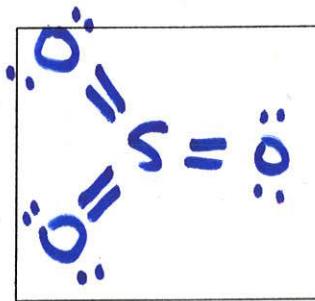

/28

1a) Draw the most stable Lewis structures for the species below using the Periodic Table on the reverse. (4 pts each/16 pts total)

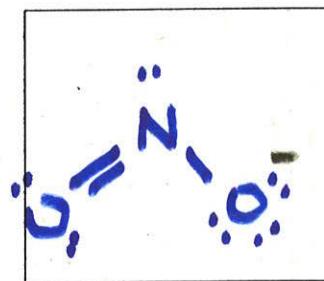

1b) Below each of your Lewis structures, provide the VSEPR-predicted shape of the molecule you drew. (2 pts each/8 pts total)

tetrahedron  
VSEPR shape  
(pyram.d)

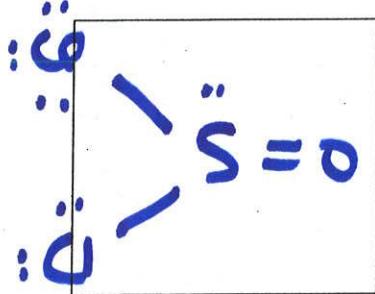

trigonal plane  
VSEPR shape

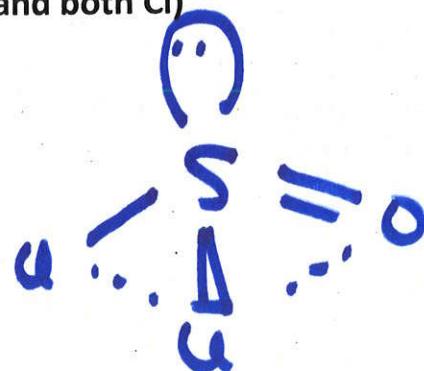

bent  
VSEPR shape

$\text{SOCl}_2$  (assume S is centrally bonded to O and both Cl)

trigonal pyramid  
VSEPR shape

2. What are the shapes of the molecules below? (1 pt each/4 pts total)

Molecule	VSEPR-predicted shape
----------	-----------------------

$\text{CH}_4$  Tetrahedral

$\text{SF}_6$  octahedral

$\text{PF}_5$  Trigonal bipyram. d

$\text{NO}_3^-$  trigonal plane
